FG Decoder

f_1 f_2 f_n

Classifier

Train using (feature, true label) pair

Filter features whose label predictions match with ground truth

Feature Memory

Find and remove outliers

f_1 f_2 . . . f_n

Average features of each class (1 to m) to create class-wise feature prototypes

μ : $(l_1, \overline{f_1})$ $(l_2, \overline{f_2})$ . . . $(l_m, \overline{f_m})$
